 - Collections Adapter** 14
 - A/R Invoicing Adapter** 15
- General Ledger** 16
- Cash Flow Ledger** 17
- Job Cost** 18
- Payroll** 19
- Fixed Assets** 20

Enhancements/Tools

- ReportMate™** 21
- ImportMate™ II** 22
- Extended Data™** 23
- SouthWare Work Flow™** 24
- Forms Adapter** 25
- Rental Department** 26
- Return Authorizations** 27
- Taskwise®** 28
- ExecuMate II™** 29
- ExcelReport II™** 30
- International Currency** 31
- SouthWare NetLink™** 32
- Database Director™ (SQL)** 33

SouthWare can be configured to run on over 600 different operating environments. The 33 modules from SouthWare provide the functions necessary to automate many different types of businesses. In addition to being able to customize the installation by the appropriate selection of modules, there are many other ways an installation can be customized:

- Customization through table settings and selections in the standard products.
- Extensive configuration settings through tables related to log-in operator preferences, hardware configuration, color and style preferences, printers, dialers, cash drawers, and a myriad of additional options.

Enhancement MODULES are designed to provide extra flexibility:

- **ReportMate™** - Easy to use report writer - Add additional reports to the system. Re-design standard reports for special needs. Works in harmony with ImportMate II™ to automate updates and custom processes.
- **Extended Data™** - Add Extra Fields and Searches.
- **Work Flow** - This module allows extensive changes to be made in SouthWare by intercepting the normal flow of operator key entry. It allows defaults to change at any field. It can provide for additional branches, computation, messaging, or call external programs (objects). **All this is done as a part of the program operating environment, not in the programs themselves! Work Flow is the end of being revision locked by custom code!**
- **SouthWare Forms™** - Report writer for forms - customize invoices, checks, statements, picking tickets and many other business forms.
- **Taskwise®** - A new module that combines the vital functions of **task management, relationship management, exception management, and information sharing** into a single company-wide system that integrates with your financial data! Its purpose is to enable you and your co-workers to work smarter and more efficiently with access to the information you need to do your job in an excellent way.
- **ExecuMate II™** - Real time financials, financial ratios, triggers to identify performance outside control parameters. Drill down into details from summaries. Drill into histories.
- **ExcelReport™** - Goal setting and Total Quality Management - statistics, events, and grades happen as a by-product of other activities.
- **SQL/ODBC/AcuXFD Technology** - Allows access to SouthWare files via SQL queries. This can be done on a file by file basis building full RDBMS (Microsoft SQL, Sybase, Informix, others) synchronized to SouthWare.
